

TEAM SAS CODIES

SBI SAARTHI

Your bank, one step ahead.

Today a bank waits for the customer to open the app, blasts the same offer to everyone, and then leaves them to do the work. For SBI's **50 crore** customers, a human relationship manager exists only for the wealthiest 1%. **Saarthi** changes engagement from broadcast to a crew of autonomous AI agents that sense each customer's money-moment, reach them in their **own language**, and complete the action for them – book the FD, shift the EMI, revive the account – every step consent-gated, guardrail-checked and audit-logged.

50 crore

CUSTOMERS SBI SERVES

~1%

GET A HUMAN
RELATIONSHIP MANAGER

22

LANGUAGES SAARTHI
SPEAKS, VOICE & TEXT

Engagement that waits, guesses, and offloads the work.

Digital engagement today is **reactive** (it waits for you to open YONO), **generic** (one offer blasted to everyone) and **unactionable** (it tells you something, then asks you to do it). At SBI's scale, that is hundreds of crores of relationships reduced to a notification nobody opens.

Reactive

MOST CUSTOMERS NEVER GO BEYOND A BALANCE CHECK · THE BANK NEVER REACHES OUT FIRST

Generic

BROADCAST SMS & PUSH → NOTIFICATION BLINDNESS, LOW CTR, OPT-OUTS

Unactionable

ADVICE WITHOUT EXECUTION · THE CUSTOMER ABANDONS BEFORE COMPLETING

1 advisor for ~1 in 100

A relationship manager exists for roughly the top 1%. The other 49.5 crore customers get the same broadcast SMS. Engagement isn't a data problem – it's an **attention-and-action problem**: the right nudge, at the right moment, finished for them.

ANATOMY OF A LOST MOMENT

01

Signal

Salary lands; ₹85k sits idle for weeks.

02

Broadcast

A generic "open an FD" SMS goes to millions.

03

Ignored

Wrong time, wrong language, no easy action.

04

Drift

Idle money, dormant account, churn to fintechs.

The engagement layer **nobody** has built.

FORCE 01

Agentic AI crossed the line

Reliable tool-use and multi-agent orchestration (LangGraph, Claude) now let software *act* safely on a customer's behalf – not just chat. Autonomy with guardrails is finally production-grade.

From chatbots to agents
that act

FORCE 02

Bharat is consent-ready

UPI-scale rails, the live **Account Aggregator** consent framework, and Bhashini's 22-language stack make vernacular, consented, real-time action possible at population scale for the first time.

Consent · vernacular ·
real-time

FORCE 03

The churn clock is ticking

Fintechs already own daily engagement; idle CASA and dormant accounts are lifetime value bleeding out. Proactive, personal engagement is now a balance-sheet defence, not a nicety.

Engagement defends the
balance sheet

THE UNFILLED GAP

Banks can **detect** moments (analytics) and have the **channels** (YONO, WhatsApp) – but the **proactive, explainable, action-closing, vernacular engagement layer** that reaches the right customer, completes the action under **consent and guardrails**, and learns from every outcome **does not exist**. That is Saarthi: an agent crew that turns a detected signal into a finished, audited action.

One loop: signal to finished action.

ONE LOOP

Beyond notifications: the closed **sense** → **reason** → **guard** → **personalise** → **act** → **learn** loop that reaches the right customer and **finishes the job** — for all 50 crore, not just the 1%.

From signal to a finished, audited action.

One message: sensed, reasoned, acted.

The customer never sees the machinery — only a timely message in their language with a single tap. Behind it, the crew has reasoned, cleared guardrails, and prepared a fully audited action.

PRODUCT, POLICY & CUSTOMER-360

Synthetic data only for the prototype – **no real customer data**. Every feature traces to a consented, auditable source.

MODEL MIX – RIGHT MODEL FOR EACH JOB

- ▶ **Claude** – planning, tool-use, guardrail reasoning
- ▶ **Fine-tuned SLMs** – high-volume routine NBA
- ▶ **XGBoost / LightGBM** – propensity scoring
- ▶ **Contextual bandit** – timing & channel choice
- ▶ **Embeddings + RAG** – product / policy retrieval
- ▶ **Bhashini / Sarvam** – 22-language ASR · TTS · MT

Cost-tiered: small models handle **~90%** of routine actions; Claude is reserved for complex, high-stakes reasoning.

THE DECISION FUNNEL – FROM RAW EVENTS TO A FINISHED ACTION

Every layer is observable and replayable – **LangSmith traces, drift monitoring and an A/B challenger** keep the crew honest, measurable and improving with every outcome.

A 30-day build to a working prototype.

If shortlisted, the team converts the idea into a live, demoable prototype in the ~30-day window – built on synthetic data, scoped to the hero scenarios, gated weekly.

Engagement you can put a number on.

+18%

CROSS-SELL
CONVERSION

01 Incremental product revenue – proactive NBAs lift cross-sell of loans, MF, insurance & deposits.

02 Idle-fund mobilisation – idle CASA converted into FDs, sweeps & SIPs.

03 Dormant revival & retention – silent accounts re-engaged; churn to fintechs defended.

04 Lower cost-to-serve – routine engagement automated vs. human RMs & call centres.

ILLUSTRATIVE IDLE-CASA LEVER – A SINGLE MECHANISM, CONSERVATIVE ASSUMPTIONS

Of idle savings balances, a small mobilised share at a modest spread compounds across a 50-crore base:

Idle CASA pool

Mobilised

Margin uplift

Figures are directional projections for the hackathon, not a forecast. Even a 1-2% lift across these levers is thousands of crores at SBI scale.

Saarthi runs internally as SBI's engagement layer over YONO, and productises as a licensable **Agentic Engagement Platform** for SBI subsidiaries, RRBs & co-operative banks – **per-active-customer or outcome-based (share-of-incremental-revenue) pricing**.

Not a chatbot. A crew that **acts**.

	PROACTIVE AT THE MOMENT	PERSONALISED TO ONE	VERNACULAR + VOICE	COMPLETES THE ACTION	MULTI-AGENT + GUARDRAILS	LEARNS EACH OUTCOME
Broadcast campaigns SMS / push blasts	☐	☐	☒	☐	☐	☐
Rule-based NBA static next-best-offer	☒	☒	☐	☐	☐	☒
Support chatbot reactive Q&A	☐	☒	☒	☒	☐	☐
SBI Saarthi agentic engagement	☒	☒	☒	☒	☒	☒

☒ Full ☒ Partial ☐ None

Each capability is something the others structurally cannot do. A campaign can't reason; a rules engine can't speak Tamil by voice and finish the action; a chatbot waits to be asked. **Saarthi is the only column that is proactive, vernacular, action-closing and guardrailed at once** – because it is a crew of autonomous agents, not a single model.

Bank-grade trust, by **design**.

Consent

Account Aggregator (Sahamati) – tokenised, purpose-limited, revocable.

Privacy

DPDP Act 2023 – PII redaction & tokenisation, data minimisation, India residency.

Regulatory

RBI digital-lending & outsourcing norms; SEBI suitability for any MF advice.

AI guardrails

OPA policy engine + LLM-as-judge; suitability, frequency caps, allow/deny actions.

Security

Encryption in transit & at rest, Vault/HSM secrets, RBAC, prompt-injection defence.

Auditability

Immutable audit trail, full agent trace, explainable decisions, human override.

Saarthi makes every one of SBI's 50 crore customers feel personally banked — proactively, in their own language, with the action already done. That is Digital Engagement, finished.
